Thermo Scientific Modified Nucleoside Phosphoramidites

For high quality oligonucleotide synthesis from bench to commercial scale

Thermo Fisher Scientific offers nonstandard nucleoside phosphoramidites for synthesis of modified oligonucleotides.

Oligonucleotides having modifications are used as primers, probes or in structural studies.

- **Duplex stability**
  Stability and melting point of oligonucleotide duplexes can be altered by incorporation of N\textsuperscript{4}-Ethyl dC, 5-Methyl dC, dI or dU into the oligonucleotide sequence

- **Mutagenesis studies**
  Mutagenic effects from methylation of exocyclic amine can be studied by incorporation of N\textsuperscript{6}-Methyl dA into the oligonucleotide sequence

- **Custom Services**
  Specialty phosphoramidites can be custom made with other base modifications or with modifications to the 2’, 3’ or 5’ positions of the sugar

- **Consistent Quality**
  Manufactured at ISO9001 registered facility

  Thoroughly documented processes provide consistent product quality with minimal batch to batch variability

- **Over 20 Years Experience**
  Manufacturing high quality phosphoramidites and oligonucleotide synthesis reagents for 20+ years

5-Methyl dC Phosphoramidite
Formula Weight: 848.0

N\textsuperscript{4}-Ethyl dC Phosphoramidite
Formula Weight: 757.9

N\textsuperscript{6}-Methyl dA Phosphoramidite
Formula Weight: 767.9

dU Phosphoramidite
Formula Weight: 730.8

dI Phosphoramidite
Formula Weight: 754.8
