TaqMan MicroRNA Assays and Arrays

Convenient, scalable solutions for microRNA quantitation, validation, and profiling

- Highly specific—quantitate only biologically active mature miRNAs
- Sensitive—minimal total RNA input requirements conserve limited samples
- Wide dynamic range—up to 9 logs—to detect high and low expressors in a single experiment
- Fast, simple, and scalable—two-step RT-qPCR assay helps to quickly provide high-quality results
- Applied Biosystems™ Megaplex™ Primer Pools—an ideal solution for human, mouse, and rat miRNA profiling
- An integrated solution—from sample preparation to miRNA data analysis on Applied Biosystems™ real-time PCR systems

MicroRNAs (miRNAs) are a class of naturally occurring noncoding RNAs that play a role in gene regulation. These transcripts are highly conserved, single-stranded RNAs (~22 nucleotides) cleaved from larger hairpin precursor transcripts. miRNAs are involved in the RNA interference pathway and affect gene regulation by cleaving or, more often, repressing the translation of their messenger RNA (mRNA) targets.

**TaqMan MicroRNA Assays—a real-time PCR revolution**

By making novel adaptations in assay design, Thermo Fisher Scientific brings the gold-standard specificity, sensitivity, and reproducibility of Applied Biosystems™ TaqMan™ Assays and quantitative real-time PCR to miRNA detection and quantitation. TaqMan MicroRNA Assays incorporate a target-specific stem–loop reverse transcription primer (Figure 1) to address a fundamental problem in miRNA quantitation: the short length of mature miRNAs (~22 nucleotides) prohibits conventional design of a random-primed RT step followed by a specific real-time assay. The stem–loop structure provides specificity for only the mature miRNA target and forms an RT primer/mature miRNA chimera that extends the 3’ end of the miRNA. The resulting longer RT product presents a template amenable to standard real-time PCR using TaqMan Assays.

To help ensure accurate results, the TaqMan MicroRNA assay design pipeline has been extensively validated using data generated from over 2,000 assays (see white paper “Design Pipeline for TaqMan™ Small RNA Assays”, available at thermofisher.com).

**The flexibility to help meet your research needs**

TaqMan MicroRNA Assays are available in a number of formats. Individual miRNA assays are perfect for targeted quantitation workflows, while Applied Biosystems™ TaqMan™ Array MicroRNA Cards and TaqMan™ OpenArray™ MicroRNA Panels enable profiling of hundreds of miRNAs in
a single experiment using human, mouse, or rat samples. TaqMan Array MicroRNA Cards are ideal for studies containing a limited number of samples and deliver the broad dynamic range for which TaqMan™ chemistry is known.

For larger studies requiring high sample throughput, TaqMan OpenArray MicroRNA Panels enable profiling of up to 36 samples per 8-hour working day.

**Distinguish between highly homologous mature miRNAs**

TaqMan MicroRNA Assays are not only specific for mature miRNAs, they can also distinguish between highly homologous targets. Because many miRNA family members differ in sequence by as little as one base, real-time PCR using TaqMan Assays helps provide the specificity needed for differentiation (Figure 2).

**Get accurate data from minimal starting material**

TaqMan MicroRNA Assays are extremely sensitive, requiring significantly less purified total RNA compared to the hundreds of nanograms needed for hybridization-based methods. Individual TaqMan MicroRNA Assays require as little as 1–10 ng of input material. The amount of sample needed is further reduced more than 300-fold when using Megaplex Primer Pools to profile hundreds of miRNAs in a single experiment.

**Superior dynamic range**

TaqMan MicroRNA Assays deliver up to 9 logs of linear dynamic range. miRNA targets that vary from a few to millions of copies can be accurately quantitated in the same experiment—an important factor, given the wide range of miRNA concentrations within and across different cells, tissue types, and disease states.

**Fast time-to-results**

Because they use gold-standard TaqMan™ reagent–based technology with universal thermal cycling conditions, TaqMan MicroRNA Assays are fast and easy to set up. Just load your total RNA sample on any Applied Biosystems real-time PCR system and get results in as little as 2 hours. Megaplex Primer Pools, used in conjunction with TaqMan Array MicroRNA Cards or TaqMan OpenArray MicroRNA Panels, provide

**Figure 1. TaqMan MicroRNA Assay mechanism.** A simple two-step mechanism brings the advantages of TaqMan real-time PCR to miRNA quantitation.

**Figure 2. Single-base discrimination of individual TaqMan MicroRNA Assays compared with two vendors.** Relative detection (%) is calculated based on Ct difference between perfectly matched and mismatched assays, where a relative detection of 50% is assigned for each Ct difference of 1.
additional throughput enhancements that simplify running hundreds of assays in parallel.

**An ideal choice for microRNA profiling**

To identify differentially expressed miRNAs, many studies begin by generating a global miRNA expression profile. Megaplex Primer Pools, in conjunction with TaqMan Array MicroRNA Cards, are perfect for such experiments. They can be used to rapidly generate a human, mouse, or rat miRNA profile, in a single working day using as little as 1 ng of total RNA (Figure 3). Combined with all the advantages of TaqMan Assay chemistry, this provides significant benefits over microarrays, which require several days and hundreds of nanograms of input RNA to generate data. For larger studies, where sample throughput is critical, TaqMan OpenArray MicroRNA Panels enable 3 samples per plate and 3 plates per run to be processed in parallel—a total of 9 samples per TaqMan™ OpenArray™ System run (Figure 4), and up to 36 samples per 8-hour working day.

**Complete product solution**

We offer the most comprehensive portfolio of innovative miRNA products and throughput solutions for your research needs. From RNA isolation kits to reagents and assays for miRNA quantitation, validation, or profiling to miRNA inhibitors and mimics for functional analysis, we offer a variety of fully validated choices to help meet your research needs.
The TaqMan MicroRNA Assays product family

TaqMan MicroRNA Assays are convenient, predesigned, functionally validated, and available in a variety of formats to best meet profiling and targeted quantitation research needs.

Applied Biosystems real-time PCR platforms

Applied Biosystems real-time PCR systems make real-time PCR more accessible than ever before by providing powerful solutions to fit the needs of any laboratory. Each system is easy to use with next-generation software and is backed by the unmatched track record of performance, quality, and long-term reliability of Applied Biosystems™ instruments.

Ordering information

**TaqMan MicroRNA Assay products**

**TaqMan MicroRNA Assays**

Choose from a collection of inventoried assays for most human and rodent miRNAs, and over 6,000 made-to-order assays for all other miRNAs in the Sanger registry. Each assay provides 50 RT (15 μL) and 150 real-time PCR (20 μL) reactions. For a complete list, go to [thermofisher.com/taqmanmirna](http://thermofisher.com/taqmanmirna)

**TaqMan MicroRNA Cards**

Ideal for smaller studies or when sample amounts are limiting in human and rodent species. Choose the full 2-card set for comprehensive coverage or either card individually for a more focused view, depending on study needs. Each card enables up to 381 TaqMan MicroRNA Assays to be run in parallel. For a complete list, go to [thermofisher.com/mirnacards](http://thermofisher.com/mirnacards)

**TaqMan OpenArray MicroRNA Panels**

Provides TaqMan MicroRNA Assays in an OpenArray Plate for a complete human or rodent miRNA profile. Workflow enhancements make this the ideal choice for medium to large study sizes. For a complete list, go to [thermofisher.com/openarray](http://thermofisher.com/openarray)

**Megaplex Primer Pools**

Required for up-front reverse transcription of miRNA prior to analysis using either TaqMan Array MicroRNA Cards or TaqMan OpenArray MicroRNA Panels. Available in a variety of packaging solutions based on species and preamplification requirements. For a complete list, go to [thermofisher.com/megaplex](http://thermofisher.com/megaplex)

**TaqMan MicroRNA Endogenous Controls**

Each endogenous control includes a 20X TaqMan Assay and a 5X reaction RT primer, providing 50 RT (15 μL) and 150 real-time PCR (20 μL) reactions. For a complete list, go to [thermofisher.com/taqmanmirna](http://thermofisher.com/taqmanmirna)

**Custom TaqMan Small RNA Assays**

Applying the same sophisticated in silico design process used for TaqMan MicroRNA Assay designs for any small RNA. To order, go to [thermofisher.com/smallrna](http://thermofisher.com/smallrna)
