E-Gel® iBase™ Power System
E-Gel® Safe Imager™ Real-time
Transilluminator

General information for using the E-Gel® iBase™ Power System with firmware version 1.4.0

Catalog Numbers  G6400, G6400EU, G6400UK, G6400ST, G6400STEU, G6400STUK, G6465, G6465EU, G6465UK, G6500, G6500ST, G6500STEU, G6500STUK, G6511ST, G6511STEU, G6511STUK, G6512ST, G6512STEU, G6512STUK, G6612ST, G6612STEU, G6612STUK

Part Number  25-0951
Publication Number  MAN0000573

Revision Date  20 September 2012

For Research Use Only: Not for use in diagnostic procedures.

The specifications for the E-Gel® Safe Imager™ Real-time Transilluminator are listed below.

**Viewing surface dimensions:** 62 mm × 77 mm

**Case dimensions:** 200 mm × 110 mm × 43 mm

**Amber filter dimensions:** 121 mm × 138 mm × 31 mm

**Weight of Safe Imager™:** 243 g

**Weight of filter:** 55 g

**Electrical requirements:**
- 100–240 V AC
- 50/60 Hz
- 1.0 A

**Temperature:** 5°C to 40°C

**Built in features:** LED light

**LED life:** 50,000 hours

**LED specifications:** Array of 12 high power LEDs emitting at 480 ± 5 nm. LEDs radiate <10 Lumens each at 200 mA.

**Included accessories:** Amber filter unit and viewing glasses for viewing results.

**Adapter Specifications:** Use only the UL Listed adapter supplied with the starter kit, or with the E-Gel® iBase™ Power System.

**Input:**
- 100–240 V AC
- 50/60 Hz
- 1 A

**Output:** 48 V DC, 0.8 A minimum
Use Conditions

The E-Gel® iBase™ Power System and E-Gel® Safe Imager™ Real-time Transilluminator comply with the Underwriters Laboratories Inc. regulation and the European Community Safety requirements. Operation of the devices are subject to the following conditions:

- Indoor use.
- Altitude below 2000 meters.
- Temperature range: 5°C to 40°C.
- Maximum relative humidity: 80%.
- Installation categories (over voltage categories) II; Pollution degree 2.
- Mains plug is a disconnect device and must be easily accessible.
- Do not attempt to open the iBase™ Power System or Safe Imager™ device. To honor the warranty, iBase™ Power System and Safe Imager™ device can only be opened and serviced by Life Technologies.
- The protection provided by the equipment may be impaired if the equipment is used in a manner not specified by Life Technologies.
- The device must be connected to a mains socket outlet with protective earthing connections.

The E-Gel® iBase™ Power System and E-Gel® Safe Imager™ Real-time Transilluminator comply with part 15 of the FCC rules. Operation of the devices are subject to the following conditions:

- The device may not cause harmful interference.
- The device must accept any interference received, including interference that may cause undesired operation.

Life Technologies Israel Ltd., is the manufacturer and owner of the UL file. For more information, contact:

Introduction

Overview

In this section, the following devices are described:

- **E-Gel® iBase™ Power System** is designed to run E-Gel® single-comb, double-comb, CloneWell™ EX, and SizeSelect™ cassettes.

- **E-Gel® Safe Imager™ Real-time Transilluminator** is designed to view gels run on the iBase™ Power System that use the SYBR® Safe DNA gel stain or E-Gel® EX, and SizeSelect™ gels that use a proprietary blue-light excitable fluorescent nucleic acid stain. Other blue blue-light excitable stains visible with the E-Gel® Safe Imager™ Transilluminator include SYBR® Gold, SYBR® Green I and II, SYPRO® Ruby, SYPRO® Orange, and Coomassie Fluor™ Orange.

Together, these systems form an integrated system for running and viewing SYBR® Safe stained E-Gel® agarose gels.

---

**E-Gel® iBase™ Power System**

The E-Gel® iBase™ Power System is an easy-to-use, programmable, automated device designed to simplify electrophoresis of single comb or double comb E-Gel® cassettes from Life Technologies. The E-Gel® iBase™ Power System is a base and a power supply combined in one device.

**E-Gel® iBase™ Features**

The E-Gel® iBase™ Power System offers:

- Program selection option
- Time control
- Reverse mode running option
- High power capability
- LCD display
- USB port to enable future program updates
The E-Gel® iBase™ Power System has an LCD display, which shows information about the program selected and running time. The display is located near the upper edge of the iBase™ device. Just below the display, the E-Gel® iBase™ Power System has four buttons (see image below):

- **Go** button starts programs
- **Mode** button toggles between programs, minutes, and seconds
- **Up** button (▲) selects between programs on the display and increases running time
- **Down** button (▼) selects between programs on the display and decreases running time

An **LED light** (in the middle of the four buttons) indicates the status of the iBase™ device.

The gel cassette is inserted into the two **Electrode** connections at the lower right of the iBase™ Power System.
The back of the E-Gel® iBase™ Power System contains a USB port and a power inlet. The supplied power cord has a matching connector that inserts into the power inlet, and connects the E-Gel® iBase™ Power System to the electrical outlet. A separate, stand-alone power supply is not required to run the iBase™ device.

**E-Gel® iBase™ Power System (back view)**
Overview, Continued

**E-Gel® Safe Imager™ Real-time Transilluminator**

The E-Gel® Safe Imager™ Real-time Transilluminator is designed for viewing E-Gel® with SYBR® Safe gels and E-Gel® CloneWell® gels on the laboratory benchtop for real-time monitoring on the E-Gel® iBase™ Power System or for documentation purposes at the end of the run directly on the E-Gel® Safe Imager™ Transilluminator.

**E-Gel® Safe Imager™ Features**

The E-Gel® Safe Imager™ Real-time Transilluminator has the following features:

- An array of 12 LED sources behind a blue filter that emit high intensity blue light.
- Red ON/OFF button is located at the front.
- Automatic shut-off option at 30 seconds and 5 minutes.
- LED indicator light adjacent to the ON/OFF button indicates the status of the Safe Imager™ unit.
- Attached short electrical cord connects to the iBase™ unit.
- USB port enables future program updates.

**E-Gel® Safe Imager™ Real-time Transilluminator (top)**

- Light source
- LED indicator light
- ON/OFF button

**E-Gel® Safe Imager™ Real-time Transilluminator (back)**

- USB port
- Power inlet
- Attached short electrical cord
Overview, Continued

Emission Spectrum of E-Gel® Safe Imager™ Trans-illuminator

Light from the array of 12 LED sources inside the transilluminator passes through a blue filter producing a single-intensity signal at approximately 480 nm, effective for the excitation of the SYBR® Safe DNA gel stain, and many of our other nucleic acid and protein stains such as SYBR® Gold, SYBR® Green I and II, SYPRO® Ruby, SYPRO® Orange, Coomassie Fluor™ Orange, and the proprietary blue-light excitable fluorescent nucleic acid stain used in E-Gel® EX, and SizeSelect™ gels.

Unlike UV-transilluminators, the E-Gel® Safe Imager™ Real-time Transilluminator does not produce UV light, however, it does utilize an intense blue light for viewing gels. Therefore, the E-Gel® Safe Imager™ amber filter unit or E-Gel® Safe Imager™ viewing glasses provided with this device should always be used to protect your eyes while viewing gels.

Note: The amber filter unit is NOT a safety screen for UV emission, and will NOT protect your eyes when viewing gels on UV transilluminators. And although the viewing glasses do block UV light, they are not designed for use as UV safety glasses.

Emission spectrum for the E-Gel® Safe Imager™ Real-time Transilluminator.
E-Gel® iBase™ Power System and E-Gel® Safe Imager™ Real-time Transilluminator form an integrated system for running and viewing SYBR® Safe stained E-Gel® agarose gels. The iBase™ device fits on the Real-time Transilluminator, and power is provided through a shared power cord/adapter (included with the E-Gel® iBase™ Power System).

With the matching amber filter mounted on top of the iBase™ device (included with the E-Gel® Safe Imager™ Real-time Transilluminator), you can follow the migration of DNA bands while they are running, or document your results at the end of the run directly.

**iBase™ and Safe Imager™ Integrated System**
Use

Device Installation

Installing the E-Gel® iBase™ Power System and E-Gel® Safe Imager™ Transilluminator

Follow these instructions to install the E-Gel® iBase™ Power System with the Safe Imager™ Real-time Transilluminator.

1. Place the E-Gel® Safe Imager™ Real-time Transilluminator on a level bench, with enough space around the unit to allow air circulation and prevent overheating.

2. Place the iBase™ unit directly onto the E-Gel® Safe Imager™ Real-time Transilluminator so that the legs of the iBase™ unit fit directly into the grooves of the Safe Imager™ Transilluminator.

3. Plug the short electrical cord of the E-Gel® Safe Imager™ Real-time Transilluminator (a) into the power inlet of the iBase™ unit (b).

4. Plug the connecting end of the power cord with the transformer (c) into the back inlet of the Safe Imager™ unit and connect the power cord to the electrical outlet. A steady, red light illuminates the E-Gel® Safe Imager™ Real-time Transilluminator, indicating that it is properly connected and ready to use. The fan in the iBase™ Power System begins, and the LED (yellow) and LCD are activated, indicating the device is on. The fan and LED will turn off after 3 seconds if no gel is inserted. The LCD initially displays the firmware version for a few seconds, then changes to display the default program (PRE-RUN, 2 minutes) or the last program used.
1. Verify that the power cord supplied with the unit is compatible with the local socket format. Contact Technical Support (page 38) if the plug does not fit.

2. Plug the connecting end of the power cord with the transformer (a) into the back inlet of the iBase™ Power System, then plug the other end into an electrical outlet. Use only properly grounded AC outlets and power cords. The fan in the device begins, and the LED (yellow) and LCD are activated, indicating the device is on. The fan and LED will turn off after 3 seconds if no gel is inserted. The LCD initially displays the firmware version for a few seconds, then changes to display the default program (PRE-RUN, 2 minutes) or the last program used.

**Note:** The fan in the device operates constantly during an electrophoresis run. However, when the power is on but there is no electrophoresis run, the fan operates only upon demand of the electronic components.
Installing the E-Gel® Safe Imager™ Transilluminator Alone

1. Place the E-Gel® Safe Imager™ Real-time Transilluminator on a level bench, with enough space around the unit to allow air circulation and prevent overheating.

2. Plug the connecting end of the power cord with the transformer (a) into the back inlet of the Safe Imager™ Real-time Transilluminator and connect the power cord to the electrical socket. The short electrical cord (b) remains disconnected.

3. A steady, red light illuminates the E-Gel® Safe Imager™ Real-time Transilluminator, indicating that it is properly connected and ready to use.
Running the iBase™ Power System

Selecting Programs

Before inserting the E-Gel® cassette make sure the program you want to use is set up properly.

1. Press the Mode button (M) until the program field (a) blinks.

2. Select the appropriate program for the gel type using the Up/Down (▲ ▼) buttons to change the program (see page 19 for list of programs).

3. To change the run time, press the Mode button until the minutes or seconds fields blink. Change the values using the Up/Down buttons. **Do not** exceed the maximal run time for the program (see page 19).

**Note:** To reset the iBase™ Power System, press and hold the Go button for three seconds until the display reads “E-Gel iBase“.
Running the iBase™ Power System, Continued

Program Parameters

The E-Gel® iBase™ Power System firmware version 1.4 is pre-programmed with 10 different programs for running various types of E-Gel® cassettes. Refer to the table below for the run parameters, default time, and maximum allowable time for each program.

<table>
<thead>

Speed Runs

The SPEED E-Gel program is used to perform a quick run to obtain a “yes/no” result. The program utilizes high power and is only suitable for 0.8%, 1.2%, and 2% E-Gel® cassettes. This program is limited to 7 minutes, where the bands migrate less than half the length of the gel. A run exceeding 7 minutes, under these conditions results in a defective run. The SPEED E-Gel mode is not compatible with E-Gel® 4% cassettes.
Running the iBase™ Power System, Continued

**Running the Gel**

For instructions on sample preparation, refer to the E-Gel® User Guide supplied with the gels, or the E-Gel® Technical Guide (Pub. No. 25-0645).

1. Select the program and set the time for your run (see page 18). If you choose to perform the optional PRE-RUN program, follow the instructions on page 22.

2. Open the package and remove the gel. Gently remove the comb(s) from the gel.

3. Slide the cassette into the two electrode connections on the E-Gel® iBase™ device. Press on the left side of the cassette to secure it into the iBase™ Power System. The two electrodes on the right side of the gel cassette must be in contact with the two electrode connections on the base. The LED illuminates with a **steady red** light to show that the cassette is correctly inserted.

4. Select the appropriate program to run your cassette, according to the table on page 19.
5. Load your samples as directed by the E-Gel® User Guide. Be sure to load the appropriate molecular weight markers, and add water to any empty wells.

6. If you want to view the bands with the E-Gel® Safe Imager™ Real-time Transilluminator while the gel runs, place the amber filter unit on top of the gel and view the gel as described in Using E-Gel® Safe Imager™ Real-time Transilluminator (page 25).

7. To start electrophoresis press the Go button, a green light illuminates to show that the run is in progress. The LCD displays the countdown time while the run is in progress.

8. The run will stop automatically when the programmed time has elapsed. The iBase™ device signals the end of the run with a flashing red light and rapid beeping for 30 seconds followed by a single beep every minute. The LCD displays “Run Complete Press Go”.

9. Press and release the Go button to stop the beeping. The light turns to a steady red light and the LCD display shows the last selected time and program.
Pre-Runs

The PRE-RUN program is optional and omitting it will not negatively affect gel performance. The PRE-RUN program may be used prior to running any of the following types of E-Gel® cassettes:

- E-Gel® 0.8%, 1.2%, 2%, 4%
- E-Gel® double comb
- E-Gel® CloneWell

Do not use the PRE-RUN program for E-Gel® EX or E-Gel® SizeSelect™ cassettes.

To pre-run a gel follow these instructions:

1. Select the PRE-RUN program on the iBase™ device.
2. Open the package and remove the gel. Do not remove the comb(s) until step 6 of this procedure.
3. Slide the cassette into the two electrode connections on the E-Gel® iBase™ device. Press on the left side of the cassette to secure it into the iBase™ Power System. The two electrodes on the right side of the gel cassette must be in contact with the two electrode connections on the base (see page 20). The LED illuminates with a steady red light to show that the cassette is correctly inserted.
4. Select the program PRE-RUN 2 min and press the Go button to pre-run the gel. The LED light changes to green, indicating that the cassette is in the pre-run mode.
5. After two minutes, the pre-run stops automatically as indicated by a red light and a beeping sound.
6. Gently remove the comb(s) from the gel.
7. Proceed to Running the Gel, Step 4 (page 20).
Running the iBase™ Power System, Continued

Downstream Application

You are now ready to proceed to imaging or any other application with the gel:

- View SYBR® Safe stained gels and E-Gel® EX and SizeSelect™ agarose gels as described in Using E-Gel® Safe Imager™ Real-time Transilluminator (page 25).
- Remove the E-Gel® cassette from the iBase™ device and view gels using your own imaging system.
- For E-Gel® CloneWell™ gels, refer to the QRC for further running information.

Interrupting a Run

You can interrupt an electrophoresis run at any time by pressing and releasing the Go button to stop the current. The stopped current is indicated by a flashing red light and the digital display flashes to indicate that the run was interrupted. The display also shows “Press Go to Run, Hold Go to Reset”.

You can remove the gel from the iBase™ to check the progress of the run. Then:

- To continue the run from the point at which it was stopped, reinsert the gel and press and release the Go button. The light changes to steady green and the LCD display shows the countdown time. It is also possible to change the remaining run time (but not the program) as described on page 18 before continuing the run.
- To cancel the rest of the interrupted run, press and hold the Go button for a few seconds. The LCD display will reset and the base will return to Ready Mode. If desired, you can then select a new program or run time as described on page 18 and rerun the gel.
Running the iBase™ Power System, Continued

Running in Reverse Direction

The REVERSE E-Gel program is used to run E-Gel® agarose gels in a reverse direction. This is particularly useful for isolating fragments using E-Gel® CloneWell and E-Gel® SizeSelect™ agarose gels.

1. Toggle between program, minutes, and seconds by pressing the Mode button (M) until program blinks.

2. Select the REVERSE E-Gel Program using the Up/Down (▲ ▼) buttons to change the program.

3. If you want to change the run time, press the Mode button until the minutes or seconds blink and change the values using the Up/Down buttons (the maximal run time for reverse running is 3 minutes).

4. To start electrophoresis press the Go button, a green light will illuminate to show that the run is in progress. The LCD display will show the countdown time while the run is in progress.

5. The iBase™ Power System will signal the end of the run with a flashing red light and rapid beeping for 30 seconds followed by a single beep every minute, while the LCD display will read “Run Complete Press Go”.

6. Press and release the Go button to stop the beeping. The light turns to a steady red light and the LCD display shows the last selected time and program.

7. Remove the E-Gel® cassette from the iBase™ Power System. You are now ready to proceed to imaging or any other application with the gel.

Note

We recommend that you disconnect the E-Gel® iBase™ Power System from the electrical outlet when not in use for a prolonged period of time.

Maintaining the E-Gel® iBase™ Power System

Keep the surfaces of the E-Gel® iBase™ Power System free of contaminants. To clean, disconnect from power source and wipe with a dry cloth. Do not attempt to open or service the bases. To honor the warranty, bases should only be opened and serviced by Life Technologies.
Using the E-Gel® Safe Imager™ Real-time Transilluminator

Introduction

Instructions to view gels with the E-Gel® Safe Imager™ Real-time Transilluminator are described in this section.

Viewing Gels

1. Place the amber filter unit on top of the sample as shown below, or use the viewing glasses when excising bands from DNA gels.

Caution: Always use the E-Gel® Safe Imager™ Amber filter unit or E-Gel® Safe Imager™ viewing glasses; to help visualize DNA when using blue-light excitable stains, and also to prevent prolonged exposure to the intense blue light.

2. Switch on the E-Gel® Safe Imager™ Transilluminator in one of these ways:

   - To activate the light for 30 seconds press and release the ON/OFF button. The LED indicator light flashes green throughout the run.
   - To activate the light for 5 minutes press and hold the ON/OFF button for a few seconds. The LED indicator light turns a steady green, then turns to flashing green in the last 30 seconds of the run.

DNA stained with blue-light excitable stains (see page 13) is immediately visible when the light is on, and amber filter unit or viewing glasses are in place.

3. To turn off the light, press and release the ON/OFF button. The LED indicator light turns red.

Note: A flashing red LED indicates an error. Wait until the LED turns a steady red before turning on the device again. If the LED does not turn red after the run, disconnect the Safe Imager™ Transilluminator and try again after a few minutes. If this problem persists, contact Technical Support (page 38).
Using E-Gel® Safe Imager™ Continued

Documenting Results

To document your results you can use any standard imaging device. Due to the small footprint, the E-Gel® Safe Imager™ Real-time Transilluminator may fit inside the cabinet of your current gel documentation system. The documentation can be performed with or without the iBase™ unit on the Safe Imager™ Transilluminator. In many cases, satisfactory results are obtained by placing the amber filter unit on top of the gel and photographing/imaging as normal.

The distance between the camera and the gel may have to be adjusted. Some CCD documentation systems may include a filter that will work in place of the amber filter unit (contact the manufacturer for filter specifications). Refer to the E-Gel® Technical Guide for instructions on best documentation practices for E-Gel® with SYBR® Safe gels or the proprietary blue-light excitable fluorescent nucleic acid stain in E-Gel® EX and SizeSelect™ agarose gels.

If you wish to document gels with other stains compatible with the E-Gel® Safe Imager™ Real-time Transilluminator (see page 13) please refer to the directions on imaging conditions and filters in the User Guide of the relevant stain. Switch on the E-Gel® Safe Imager™ Real-time Transilluminator before documenting the results.

Maintaining the E-Gel® Safe Imager™ Real-time Transilluminator

After viewing or documenting the results, switch the E-Gel® Safe Imager™ Real-time Transilluminator off. The Safe Imager™ Real-time Transilluminator can be cleaned with a dry cloth, a wet cloth with water and mild soap, or ethanol. Avoid damaging or scratching the glass surface of the Safe Imager™ Transilluminator with abrasive cleaners, sharp instruments, or harsh solvents. Before cleaning the instrument, disconnect it from the electrical outlet.

Note: We recommend that you disconnect the E-Gel® Safe Imager™ Real-time Transilluminator from the electrical outlet when not in use for a prolonged period.

## Troubleshooting

### Introduction

The following table provides some solutions to the problems you might encounter when using the E-Gel® iBase™ and E-Gel® Safe Imager™ Integrated System.

For troubleshooting resolution and sample preparation problems, refer to the User Guide supplied with the gels.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Reason</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>No current</td>
<td>Copper contacts in the iBase™ unit are damaged due to improper use.</td>
<td>Ensure that the copper contact in the base is intact.</td>
</tr>
<tr>
<td></td>
<td>Expired or defective gel cassette used.</td>
<td>Use fresh gel cassette. Use properly stored gels before the specified expiration date.</td>
</tr>
<tr>
<td></td>
<td>Gel cassette is not correctly inserted into the base.</td>
<td>Remove cassette and reinsert; a steady red light is illuminated on the base when the cassette is correctly inserted and power is on.</td>
</tr>
<tr>
<td></td>
<td>iBase™ device not properly connected to E-Gel® Safe Imager™ Real-time Transilluminator.</td>
<td>Plug the E-Gel® Safe Imager™ Real-time Transilluminator short electrical cord into the iBase™ Power System power inlet directly.</td>
</tr>
<tr>
<td>Over-run the gel or need more time to run gel</td>
<td>Accidentally selected an incorrect program.</td>
<td>Select program according to program parameters on page 19.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If you are at the beginning of the run, stop the run and select the desired program.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If you are well into the run, check the gel to see where the loading dye is running. Estimate the amount of time remaining and manually stop the run.</td>
</tr>
<tr>
<td>Problem</td>
<td>Reason</td>
<td>Solution</td>
</tr>
<tr>
<td>---------</td>
<td>--------</td>
<td>----------</td>
</tr>
<tr>
<td>Failure Mode indicated by “Cassette Missing Hold Go to Reset”, and continuous loud beeping.</td>
<td>Defective cassette</td>
<td>Disconnect iBase™ Power System and remove the gel cassette from the base. Press and hold the Go button for 2 seconds to return to Ready Mode. Use a fresh gel cassette.</td>
</tr>
<tr>
<td>Cold cassette</td>
<td></td>
<td>Use a room temperature cassette stored at room temperature. Avoid storing gel cassettes at 4°C.</td>
</tr>
<tr>
<td>Improper operating conditions</td>
<td>Use iBase™ Power System at room temperature (20°C to 25°C).</td>
<td></td>
</tr>
<tr>
<td>Bands not visible in middle area of gel.</td>
<td>Gel overheated due to selection of improper time or program</td>
<td>Let gel cool down and check again. Use suggested settings next time.</td>
</tr>
<tr>
<td>High background, suboptimal, or no image when using Safe Imager™ Real-time Transilluminator.</td>
<td>No filters or wrong filter set.</td>
<td>Refer to E-Gel® Technical Guide to determine the optimal filter sets to use, or contact the instrument manufacturer for advice.</td>
</tr>
<tr>
<td>Photographic settings not optimal.</td>
<td>Optimize settings of your system empirically for E-Gel® with SYBR® Safe or other blue-light excitable stains (see page 13). You may need to increase the exposure time or gain setting.</td>
<td></td>
</tr>
<tr>
<td>Low sample concentration</td>
<td>Use E-Gel® EX or E-Gel® SizeSelect™ agarose gels.</td>
<td></td>
</tr>
<tr>
<td>Stripes visible on image when using Safe Imager™ Transilluminator.</td>
<td>No IR coating on camera lens.</td>
<td>Use IR blocking filter or emission filter with IR coating.</td>
</tr>
</tbody>
</table>
## Firmware Update

To upgrade the firmware on the E-Gel® iBase™ Power System:

1. Download the iBase™ Power System updater program from [www.lifetechnologies.com/ibase](http://www.lifetechnologies.com/ibase).
2. Disconnect the electrical plug of the iBase™ Power System from the electrical outlet.
3. Ensure the USB cable is disconnected.
4. Press and hold the **Go** button (red button).
5. Continue holding the **Go** button, insert the power plug into the electrical outlet, and then connect the cable to the iBase™ unit.
6. Release the **Go** button and connect the iBase™ unit to this computer with a USB A to B cable (A into the computer, B into the iBase™ device). The computer should now search for the iBase™ device. This step may take several minutes.
7. The program will inform it is searching for the iBase™ Power System.
8. The program will inform the iBase™ Power System has been found.
9. Click **Next** to begin the iBase™ Firmware Update.
10. Do not disconnect or use device until iBase™ Updater is compete.
11. Disconnect the USB cable from the iBase™ device. The iBase™ device is now updated.

## Troubleshooting

If the message “The Update Failed” appears, retry the program. If the problem persists contact Technical Support (page 38) for further assistance.
Appendix

Explanation of Symbols and Warnings

The CE mark symbolizes that the product conforms to all applicable European Community provisions for which this marking is required.

The E-Gel® iBase™ Power System and E-Gel® Safe Imager™ Real-time Transilluminator comply with the Underwriters Laboratories Inc. regulation and the European Community Safety requirements. The E-Gel® iBase™ Power System and E-Gel® Safe Imager™ Real-time Transilluminator comply with part 15 of the FCC rules. The E-Gel® Safe Imager™ Real-time Transilluminator complies with AS/NZS CISPR22:04 (Australia). The product adheres to the EN60825-1 standard, publication date: EN 60825-1:1994 + A1 + A2

Operation of the E-Gel® iBase™ Power System and E-Gel® Safe Imager™ Real-time Transilluminator are subject to the conditions described in this User Guide. The protection provided by the equipment may be impaired if the equipment is used in a manner not specified by Life Technologies.

Do not dispose of this product in unsorted municipal waste.

CAUTION! To minimize negative environmental impact from disposal of electronic waste, do not dispose of electronic waste in unsorted municipal waste. Follow local municipal waste ordinances for proper disposal provision and contact customer service for information about responsible disposal options.
The E-Gel® Safe Imager™ Real-time Transilluminator is classified as a Class 1 LED product, which is indicated by the symbol to the left.

A yellow label is affixed to the side of the E-Gel® Safe Imager™ Amber filter stating: “Caution – Class 2 LED radiation when open, do not stare into the beam.”
Safety Information

⚠️ CAUTION!  
(For iBase™ Power System)

- Do not attempt to open the E-Gel® iBase™ Power System.
- The adapter must be connected to a mains socket outlet with matching protective earthing connections.
- Mains plug is a disconnect device and must be easily accessible.
- Do not touch or handle the E-Gel® cassette during a run (when the green light is illuminated).

⚠️ CAUTION!  
(For Safe Imager™ Transilluminator)

- Do not attempt to open the E-Gel® Safe Imager™ Real-time Transilluminator.
- The adapter must be connected to a mains socket outlet with matching protective earthing connections.
- Mains plug is a disconnect device and must be easily accessible.
- Use of controls or adjustment or performance of procedures other than those specified may result in hazardous radiation exposure.
- Class 2 LED radiation when open.
- Do not stare into the beam.
- Always use the E-Gel® Safe Imager™ Amber filter unit or E-Gel® Safe Imager™ viewing glasses provided with this device while viewing gels to protect your eyes. Amber filters absorb radiation from 190–530 nm, with an OD of over 3.

⚠️ CAUTION!  
(For Safe Imager™ Transilluminator)

Class 2(II) visible and/or invisible LED radiation present when open. Do not stare directly into the beam or view directly with optical instruments.
The E-Gel® Safe Imager™ Real-time Transilluminator is an electrical device. Never touch the power cord or outlet with wet hands. Do not use this device in damp areas or while standing on damp floors. Do not attempt to open the E-Gel® Safe Imager™ Real-time Transilluminator.

The E-Gel® Safe Imager™ Real-time Transilluminator should be used with the supplied power cord, or with the E-Gel® iBase™ Power System. This power cord has a universal transformer compatible with 90 V to 220 V. Only these power cords should be used to power the device. Attach the power cord to the E-Gel® Safe Imager™ Real-time Transilluminator at the back of the device. Plug the other end of the power cord into a properly grounded electrical outlet, ensuring the correct plug adaptor is attached. Always disconnect the E-Gel® Safe Imager™ Real-time Transilluminator from the electrical outlet before cleaning the device.

The E-Gel® Safe Imager™ Real-time Transilluminator does not produce UV-light, however, it does utilize an intense blue light for viewing gels. It should be noted that published literature has identified blue light as a possible risk factor for macular degeneration; however, no clinical studies have been published. Therefore, the E-Gel® Safe Imager™ amber filter unit or E-Gel® Safe Imager™ viewing glasses provided with this device should be used to protect your eyes while viewing gels. The amber filter unit is NOT a safety screen for UV emission, and will NOT protect your eyes when viewing gels on UV transilluminators. Although the viewing glasses do block UV light, they are not designed for use as UV safety glasses.

Do not leave the E-Gel® Safe Imager™ Real-time Transilluminator switched on for extended periods of time. After viewing and documenting the gel or sample, always switch the unit off.
## Accessory Products

### Molecular Weight Markers

The recommended marker for each gel type is listed in the User Guide supplied with the gels, or the *E-Gel® Technical Guide*. For more information, visit [www.lifetechnologies.com](http://www.lifetechnologies.com) or contact Technical Support (page 38).
## Technical Support

### Obtaining Support

For the latest services and support information for all locations, go to [www.lifetechnologies.com](http://www.lifetechnologies.com).

At the website, you can:

- Access worldwide telephone and fax numbers to contact Technical Support and Sales facilities
- Search through frequently asked questions (FAQs)
- Submit a question directly to Technical Support ([techsupport@lifetechnologies.com](mailto:techsupport@lifetechnologies.com))
- Search for user documents, Safety Data Sheets (SDSs), vector maps and sequences, application notes, formulations, handbooks, certificates of analysis, citations, and other product support documents
- Obtain information about customer training
- Download software updates and patches

### Safety Data Sheets (SDS)

Safety Data Sheets (SDSs) are available at [www.lifetechnologies.com/support](http://www.lifetechnologies.com/support).

### Certificate of Analysis

The Certificate of Analysis is available at [www.lifetechnologies.com/support](http://www.lifetechnologies.com/support). Search for the Certificate of Analysis by product lot number, which is printed on the box.

### Limited Product Warranty

Life Technologies Corporation and/or its affiliate(s) warrant their products as set forth in the Life Technologies’ General Terms and Conditions of Sale found on Life Technologies’ website at [www.lifetechnologies.com/termsandconditions](http://www.lifetechnologies.com/termsandconditions). If you have any questions, please contact Life Technologies at [www.lifetechnologies.com/support](http://www.lifetechnologies.com/support).
Life Technologies warrants that E-Gel® iBase™ Power System will be free from defects in material and workmanship for a period of one year from date of purchase. If a defect is present, Life Technologies will, at its option, repair, replace, or refund the purchase price of this product at no charge to you, provided it is returned during the warranty period. This warranty does not apply if the product has been damaged by accident, abuse, misuse or misapplication, or from ordinary wear and tear. This warranty shall be limited to the replacement of defective products. **It is expressly agreed that this warranty will be in lieu of all warranties of fitness and in lieu of the warranty of merchantability.**
