When user-friendliness and reliability matter

Thermo Scientific Viscometer
Basic principles in rheology
Selecting a viscometer

Viscometry

Viscometers determine the flow behavior of fluids. Viscosity describes a material property which is dependent on different parameters such as mechanical stress and strain, time as well as temperature and other ambient conditions.

Flow behavior

In rheology we differentiate between so-called Newtonian and non-Newtonian materials. Newtonian materials are characterized by a viscosity which may depend on temperature but is independent of the shear rate (and shear stress). Yet the viscosity of non-Newtonian materials depends on the shear rate. For most non-Newtonian materials the viscosity decreases with increasing shear rate. This behavior is called shear-thinning, or pseudoplastic. A material in which viscosity increases at increasing shear rates is called shear-thickening or dilatant.

Materials that do not flow until the applied shear stress surpasses a certain value are said to have a yield-stress.

Rotational viscometers

Using a rotational viscometer, the viscosity is calculated from the measured torque and rotational speed as well as the dimensions of the measuring geometry. If the measuring geometry fulfills certain requirements (e.g. small gap), which is the case for coaxial cylinder, plate/plate and cone/plate measuring geometries (DIN 53018, DIN 53019...), the absolute value of the viscosity can be calculated.

If the dimensions of the measuring geometry are not well defined, only a relative value for the viscosity can be determined. In this case, the measured viscosity value not only depends on the ambient conditions, but also on the test method, i.e. the measuring geometry.

Falling ball viscometers

The falling ball viscometer is a conventional and highly accurate instrument for the determination of the absolute value of the viscosity of a Newtonian material. The viscosity can be calculated from the falling time of the ball, the density of the ball as well as the diameter of the tube and the ball.

* For Newtonian substances  ** Using absolute measuring geometries
Application
These small, battery-operated rotational viscometers are suitable for quick and reliable tests and comparative measurements for quality control applications. The hand-held instruments can also be operated on a stand.

User friendliness
The operation of the Thermo Scientific HAAKE Viscotester 1 plus and 2 plus is easy due to the one-button operation. The viscotester is switched on and off by pushing the button once. Pushing the button again selects the rotor type and starts the measurement.

Digital display
Contrary to the traditional viscotester models where the viscosity value is read from an analog dial, the HAAKE Viscotesters 1 plus and 2 plus show the viscosity value on a digital display. Therefore, errors caused by misreading the dial belong to the past. Possible handling errors as well as service information are also shown on the display.

Main features
- Quick, exact and reliable
- One button operation
- LCD display
- No mains supply required

Typical application fields
- Quick viscosity tests, e.g. for process optimization or machine adjustment
- Batch control in production

Typical samples
- Printing inks, paints, inks
- Shampoos, creams, lotions
- Oils, greases, pastes
- Sauces, thickeners

Measuring principle
A rotor rotating at a constant speed is immersed in the fluid to be tested; the fluid’s resistance to the rotation measures the viscosity of the fluid. The small battery-operated rotational viscometer can be operated independently of a mains supply, which means quick and reliable viscosity measurements can be performed virtually everywhere.

Compatibility
Measuring cups and rotors from previous viscometer models – Thermo Scientific HAAKE VT01 and VT02 – can also be used with the plus units.

\*1 mPas = 1 cP
Application
The Thermo Scientific HAAKE Viscotester E, D and C units can be used for tests and comparative measurements for quality control according to recognized standards.

Measuring principle
The HAAKE Viscotester E, D and C are classical rotational viscometers that measure the resistance of a test substance against a preset speed. The resulting torque or resistance measures the viscosity of the fluid. The higher the torque, the higher the viscosity. Due to the type of standardized geometries, the shear rates generated can only be determined precisely for Newtonian substances.

Compatibility
The basic ISO 2555 standard describes the design and the characteristic measuring technique of a viscosity measuring instrument (torque, speed, rotor geometry). If rotational viscometers meet these requirements, results comply.

Common features of the HAAKE Viscotester E, D and C
• Ready to go package – unpack, switch on and start measuring viscosity
• Digital display of viscosity, % torque, speed, spindle, upper viscosity limit, temperature (optional), in selectable units
• Integrated automatic diagnostic functionality
• Visual and acoustic signals at critical measuring conditions
• Easy viscosity and temperature (optional) calibrations
• 10 user interface languages
• 2 years warranty

Standards
The HAAKE Viscotester E, D and C meet the following standards:
BS: 6075, 5350; ISO: 2555, 1652
ASTM: 115, 789, 1076, 1084, 1286, 1417, 1439, 1638, 1824, 2196, 2336, 2364, 2393, 2556, 2669, 2849, 2983, 2994, 3232, 3236, 3716

Technical data
• Viscosity range: depending on version (L or R)
• Accuracy: +/- 1 % FSD
• Reproducibility: 0.2 %
• Supplied at 100 – 240 V/50 – 60 Hz
HAAKE Viscotester C – The convenient model
For easy, fast and accurate manual viscosity measurements.
Additional features:
- Simple and intuitive operation
- 4 line LCD display with 6 keys
- Rotational speeds: 21 between 0.1 rpm and 200 rpm
- Viscosity range:
  - R-Version: 100 mPas – 13.000.000 mPas
  - L-Version: 15 mPas – 2.000.000 mPas
Order No. | Description
--- | ---
399-0300 | HAAKE Viscotester C (R-version) Base unit with stand, spindles R2 to R7, rack, spindle guard and carrying case
399-0301 | HAAKE Viscotester C (L-version) Base unit with stand, spindles L1 to L4, rack and spindle guard and carrying case

HAAKE Viscotester D – The distinct model
For routine viscosity measurements with data transfer.
Additional features:
- 6 line LCD display with 6 keys
- Internal memory for 9 basic measuring routines
- USB interface for data transfer to PC
- Rotational speeds: 21 between 0.1 rpm and 200 rpm
- Viscosity range:
  - R-Version: 100 mPas – 13.000.000 mPas
  - L-Version: 15 mPas – 2.000.000 mPas
Optional:
- Temperature sensor Pt 100
- Display of sample temperature
- One hand quick fit coupling for spindles
- HAAKE RheoWin data evaluation software
Order No. | Description
--- | ---
399-0400 | HAAKE Viscotester D (R-version) Base unit with stand, spindles R2 to R7, rack, spindle guard in a carrying case
399-0401 | HAAKE Viscotester D (L-version) Base unit with stand, spindles L1 to L4, rack, spindle guard in a carrying case
399-0410 | HAAKE Viscotester D (R-version) 399-0400 with quick fit coupling
222-2003 | Temperature sensor Pt 100

HAAKE Viscotester E – The expert model
For automatic flow curve measurements with full PC control.
Additional features:
- 6 line LCD display with 12 keys
- Display of sample temperature, shear rate and shear stress for coaxial spindles, routine parameters, etc.
- Internal memory for 9 advanced measuring routines
- Routine programming functions
- USB for software control
- Rotational speeds: 54 between 0.01 rpm and 200 rpm
- Viscosity range:
  - R-Version: 100 mPas – 40.000.000 mPas
  - L-Version: 15 mPas – 6.000.000 mPas
Optional:
- One hand quick fit coupling for spindles
- HAAKE RheoWin measuring and evaluation software
Order No. | Description
--- | ---
399-0500 | HAAKE Viscotester E (R-version) Base unit with stand, spindles R2 to R7, rack, spindle guard, Pt 100 in a carrying case
399-0501 | HAAKE Viscotester E (L-version) Base unit with stand, spindles L1 to L4, rack, spindle guard, Pt 100 in a carrying case
399-0510 | HAAKE Viscotester E (R-version) 399-0500 with quick fit coupling
399-0511 | HAAKE Viscotester E (L-version) 399-0501 with quick fit coupling
The HAAKE Viscotesters E, D and C are supplied as a complete measuring unit consisting of a basic instrument with stand and a set of spindles with a storage rack – all in a carrying case with multilingual documentation.

**ACCESSORIES**

### Helipath

for comparative measurements on high viscous samples such as creams, pastes and gels

The up and down movement of the measuring head allows the needle spindle to cut into fresh material tracing a helical path through the sample

<table>

### HAAKE RheoWin software for HAAKE Viscotester E and D

Highly customizable and extremely easy to use software for both beginners and professionals consisting of:

- JobManager for fully automated measuring and analysis routines (for HAAKE Viscotester E only)
- DataManager for data analysis and creating reports
- User Manager for user access control and assignment of specific access rights

<td>Pt 100 temperature sensor for falling ball - DC50 circulator</td>
</tr>
</tbody>
</table>

**Technical data**

- Viscosity range: 0.5 mPas – 10⁶ mPas (cP)
- Temperature range: -20 °C to +150 °C
- Reproducibility: < 0.5 %
- Comparability: < 1 %
- Material: Falling tube, balls 1, 2 and G, borosilicate glass; balls 3, 4, 5 and 6, Nickel iron alloy

**Measuring principle**

The time for rolling and sliding movements of a ball through the sample liquid in an inclined cylindrical measuring tube is measured. The sample viscosity is correlated with the time needed by a ball to traverse a definite distance.

By turning the measuring tube upside down again the return of the ball may also be used for an additional measurement. The test results are given as dynamic viscosity in the internationally standardized, absolute units of milli Pascals seconds (mPas).

**Application**

The Thermo Scientific HAAKE Falling Ball Viscometer type C provides a very accurate way of measuring the viscosity of transparent Newtonian liquids and gases. It meets the requirements of the German DIN 53015 as well as ISO 12058 standard and it is accepted as an official reference instrument. Its measuring accuracy when supported with the precise temperature control of a circulator is among the highest available in any type of viscometer.

- Chemical industry (polymer solutions, solvents, inks)
- Pharmaceutical industry (raw materials, glycerine)
- Food industry (gelatin, sugar solutions)
- Mineral oil industry (oils, liquid hydrocarbons)
Measuring Principle

By its design, the Thermo Scientific HAAKE Viscotester 550 is a Searle viscometer. A rotational speed is preset and the flow resistance of the sample is measured, in other words, the torque required to maintain the set speed is proportional to the viscosity. From the torque required, the set speed and the geometry factors of the applied sensor, all final information on the viscosity, shear stress and the shear rate is calculated. The results are displayed digitally and can be printed simultaneously.

Features

- Precise measurements of viscosity in controlled rate “CR”-mode
- Yield point determination in controlled deformation “CD”-mode
- Robust and reliable rotational viscometer for use with predefined internal routines or with HAAKE RheoWin software (optional)

Measuring Geometries

- Coaxial cylinders according to DIN 53018 and ISO 3219. Exact temperature control can be provided by use of a circulator
- Immersion geometries according to DIN 53019 and ISO 3219
- Cones and plates according to ISO 3219
- Relative geometries according to ISO 2555
- Special immersion geometries:
  - for highly filled samples or containing large particles
  - for the determination of the yield point

Application

The HAAKE Viscotester 550 is specially designed for quality control applications. It is a rotational viscometer that measures precisely, quickly and simply the viscosity and flow behavior of liquid and semisolid test materials.

All results like viscosity, shear stress, shear rate, yield point and operating temperature are displayed in the digital LED display.

The HAAKE Viscotester 550 does not mind if a sample is thin like an oil, a paint or a ceramic slurry or as pasty as cremes, salves or a PVC plastisol. The HAAKE Viscotester 550 covers the whole application range from very thin to very thick. Even more demanding tasks can be fulfilled.

For example, the automatic characterization of the flow behavior of non-Newtonian fluids or the determination of the yield point using the CD-principle (= Controlled Deformation) can be done. Any one out of a set of 10 predefined routines will be executed with precision and repeatability.

Technical data

- Speed Range: 0.5 rpm – 800 rpm
- Uncertainty: +/- 0.1%
- CD Mode: 0.0125 rpm
- Torque Range:
  - up to 400 rpm: 0.1 mNm – 30 mNm
  - up to 800 rpm: 0.1 mNm – 20 mNm
- Uncertainty: +/- 0.5% FSD
- Temp. Range: -50 °C – +250 °C depending on measuring system
- Interface: RS232C
- Autoswitch Power Supply: 230 V/115 V (50 Hz – 60 Hz)

Chocolate, beverages, thickening agents, stabilizer, starch, pectin
**Cosmetic/Pharmaceutical Industry**
Creams, lotions, shampoos, liquid soaps
**Paint Industry**
Water-based paints, latex paints, thickening agents
**Chemical Industry**
Liquid raw materials, oils, polymer solutions

**Description**
DIN package for measurements on liquids for lower to higher viscosities, which are available in larger quantities and easy to clean.

**Content**
- HAAKE Viscotester 550 (115-230V/50-60Hz)
- Support stand for base unit
- Temperature control vessel with connector to circulator (Ø 8 mm)
- Pt 100 temperature sensor
- Coaxial cylinder geometries: MV/DIN and SV/DIN

---

**Order-No.**
362-0041 European Version
362-0042 US Version

**Applications**
**Food Industry**
Dairy products (e.g. yogurt), jam, sauces
**Construction Materials**
Slurries
**Others**
Measurements in original containers

**Description**
Package for yield point determination suitable for highly thixotropic materials, samples which are difficult to measure (e.g. due to sedimentation) or with bigger particles.

**Content**
- HAAKE Viscotester 550 (115-230V/50-60Hz)
- Support stand for base unit
- Universal joint for FL sensors
- Vane rotor FL100, star shaped
- HAAKE RheoWin measuring and evaluation software, incl. computer cable
Order-No. 362-0100 European Version 362-0101 US Version

Applications
Practical experiments with theoretical background for beginners
Experiment 1: Newtonian fluids
Experiment 2: Non-Newtonian fluids

Description
Educational package – an introduction to rheology

Content
HAAKE Viscotester 550 (115-230V/50-60Hz)
• Support stand for base unit
• Temperature control vessel with connector to circulator (Ø 8 mm)
• Pt 100 temperature sensor
• Coaxial cylinder geometry. MV/DIN
• HAAKE RheoWin measuring and evaluation software, incl. computer cable
• Participation in a one-day training (training program: www.thermoscientific.com/mc)
• Documentation "Introduction to rheology", directions for two practical experiments

Order-No. 327-0001 European Version 327-0002 US Version

Application
Food Industry
Dough, margarine, fats, butter
Cosmetic/Pharmaceutical Industry
Creams, toothpaste, lipsticks
Paint and Electronic Industry
Thickening agents, resins, printing inks
Chemical Industry
Paste-like raw materials and intermediate products

Description
DIN package for measurements on pastes with medium to higher viscosities, which are limited in volume, expensive or difficult to clean

Content
HAAKE Viscotester 550 (115-230V/50-60Hz)
• Support stand for base unit and plate-cone measuring system
• Cone and plate measuring system PK100 with connector for circulator (Ø 8 mm)
• Pt 100 temperature sensor included in the measuring plate
• Measuring plate MP60 (Steel 18/8)
• Cone PK1, 1°

Order-No. 362-0100 European Version 362-0101 US Version

Technical data
Rotational speed: 0.0125 rpm – 1000 rpm
Torque: 0.1 mNm – 50 mNm
Temp. range: -40°C – +350°C depending on temperature control unit
RESULTS
HAAKE VISCOTESTER 550

Flow Curve
A flow curve characterizes the flow behavior of a sample. It also allows estimations of storage stability and processing conditions. Important special characteristics like pseudoplasticity, plasticity and thixotropy are automatically quantified by the HAAKE Viscotester 550 and can easily be taken from the protocol.

Yield Point
The yield stress is the force required to make a material flow. It controls the thickness of coating layers, ensures storage stability but inhibits free flow. By applying the CD-method (Controlled Deformation) the HAAKE Viscotester 550 characterizes the yield point with very high reproducibility.

Time Curve
Chemical or physical changes in the sample can be tracked with a time curve. The test consists of applying a constant shear rate and monitoring the viscosity as a function of time. Time-dependant phenomena such as epoxy curing, chemical reactions and thixotropy breakdown can be precisely determined.

Temperature Curve
It is important to know the behavior of viscosity as a function of temperature. This can be realized by applying a constant shear rate to a sample and monitoring the viscosity as a function of temperature. Greases and oils must perform in summer and winter, and likewise food products must retain their shape under various temperatures.
Select only the service modules you want. Add modules at the time of equipment purchase, during warranty, or after. Combine modules. Or create a customized service plan that matches your unique requirements. We can offer comprehensive consultation to help choose the right options.

And if you require services not described here, please call us. We’ll develop customized solutions for you. Visit www.thermo.com/mc_service for more detailed information. And then phone your Thermo Fisher Scientific sales representative to arrange for your free service assessment.

We supply liquids with different qualities:

About Thermo Fisher Scientific

Thermo Fisher Scientific Inc. (NYSE: TMO) is the world leader in serving science. Our mission is to enable our customers to make the world healthier, cleaner and safer. With revenues of more than $10 billion, we have approximately 35,000 employees and serve customers within pharmaceutical and biotech companies, hospitals and clinical diagnostic labs, universities, research institutions and government agencies, as well as in environmental and process control industries. We create value for our key stakeholders through two premier brands, Thermo Scientific and Fisher Scientific, which offer a unique combination of continuous technology development and the most convenient purchasing options. Our products and services help accelerate the pace of scientific discovery, and solve analytical challenges ranging from complex research to routine testing to field applications. Visit www.thermofisher.com.

Thermo Fisher Scientific, one of the pioneers in rheology, successfully supports a wide range of industries with its comprehensive Thermo Scientific material characterization solutions. Material characterization solutions analyze and measure viscosity, elasticity, processability and temperature-related mechanical changes of plastics, food, cosmetics, pharmaceuticals and coatings, chemical or petrochemical products, plus a wide variety of liquids or solids. For more information, please visit www.thermoscientific.com/mc.
