Molecular Weight: 213.89
Formula: NaIO₄
CAS #: 7790-28-5
ACS Reagent Grade white, crystalline powder

Storage: Upon receipt store at room temperature.

Introduction
Thermo Scientific™ Sodium meta-Periodate is a mild oxidant for converting cis-glycol groups in carbohydrates to reactive aldehyde groups, which may then be targeted in detection or chemical conjugation procedures. Carbohydrate groups in glycoproteins are excellent sites for modification or cross-linking reactions because they allow the conjugation reaction to be directed away from amino acids in the polypeptide chain that may be critical for protein activity. Sodium meta-periodate cleaves bonds between adjacent carbon atoms that contain hydroxyl groups (cis-glycols), creating two aldehyde groups that are spontaneously reactive to amine- and hydrazide-activated labeling or cross-linking reagents.

Certain sugar groups are more susceptible to oxidation (cleavage) by periodate, affording the possibility of adjusting the amount of periodate to cleave particular sugars in the polysaccharide chains. For example, 1mM sodium meta-periodate oxidized only the bond between adjacent hydroxyls of sialic acid, a common terminal sugar residue in glycoprotein polysaccharides. On the other hand, treatment with >10mM sodium meta-periodate ensures oxidation of many sugar residues, including galactose and mannose.

The generated aldehydes can be used in two basic types of coupling reactions. Primary amines will form Schiff bases with aldehydes that can be stabilized to secondary amine bonds by reduction with sodium cyanoborohydride (Thermo Scientific™ AminoLink™ Reductant, Product No. 44892). Alternatively, hydrazide-activated molecules will spontaneously react with aldehydes to form fairly stable hydrazone linkages; addition of sodium cyanoborohydride will increase reaction efficiency and bond stability. For specific detection and cross-linking procedures involving periodate-oxidized polysaccharides, consult the instructions for the products listed in the Related Thermo Scientific Products Section of these instructions.

Procedure for Periodate Oxidation of Glycoprotein Carbohydrates

A. Additional Materials Required
- Oxidation Buffer: 0.1M sodium acetate buffer, pH 5.5. Neutral buffers, such as sodium phosphate, pH 7.0, can be used but are not as efficient for oxidation as slightly acidic conditions. Avoid buffers containing primary amines (e.g., Tris) or sugars, which will compete with the intended oxidation and subsequent reactions.
- Glycoprotein Solution: 0.5-10mg/mL of glycoprotein in oxidation buffer
- Dialysis cassette or desalting column (see Related Thermo Scientific Products) to purify oxidized glycoprotein from excess periodate
- Amber vial or reaction vessel that can be protected from light
B. Procedure

Note: Steps 2 and 3 are light-sensitive and must be performed in an amber vial or wrapped in foil.

1. Dissolve 0.5-10mg glycoprotein (e.g., polyclonal antibody) in 1ml of oxidation buffer.

2. Weigh 2.1mg of sodium meta-periodate into an amber vial and add 1ml of glycoprotein solution, gently swirling the vial until the powder dissolves (results in 10mM periodate). Alternatively, dissolve 4.3mg of periodate in 1mL of oxidation buffer (20mM periodate) and then add 1mL of glycoprotein solution.

   Note: To oxidize only sialic acid groups, add 50µL of 20mM periodate to 1mL of glycoprotein for a final concentration of 1mM periodate.

3. Protect sample from light and incubate for 30 minutes at room temperature.

4. Desalt or dialyze the sample to remove the sodium meta-periodate. Maintain the oxidized sample in an amine-free buffer until the intended experimental reactions with aldehyde groups have been completed.

General Reference

Product References

Products are warranted to operate or perform substantially in conformance with published Product specifications in effect at the time of sale, as set forth in the Product documentation, specifications and/or accompanying package inserts (“Documentation”). No claim of suitability for use in applications regulated by FDA is made. The warranty provided herein is valid only when used by properly trained individuals. Unless otherwise stated in the Documentation, this warranty is limited to one year from date of shipment when the Product is subjected to normal, proper and intended usage. This warranty does not extend to anyone other than Buyer. Any model or sample furnished to Buyer is merely illustrative of the general type and quality of goods and does not represent that any Product will conform to such model or sample.

NO OTHER WARRANTIES, EXPRESS OR IMPLIED, ARE GRANTED, INCLUDING WITHOUT LIMITATION, IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR ANY PARTICULAR PURPOSE, OR NON INFRINGEMENT. BUYER’S EXCLUSIVE REMEDY FOR NON-CONFORMING PRODUCTS DURING THE WARRANTY PERIOD IS LIMITED TO REPAIR, REPLACEMENT OF OR REFUND FOR THE NON-CONFORMING PRODUCT(S) AT SELLER’S SOLE OPTION. THERE IS NO OBLIGATION TO REPAIR, REPLACE OR REFUND FOR PRODUCTS AS THE RESULT OF (I) ACCIDENT, DISASTER OR EVENT OF FORCE MAJEURE, (II) MISUSE, FAULT OR NEGLIGENCE OF OR BY BUYER, (III) USE OF THE PRODUCTS IN A MANNER FOR WHICH THEY WERE NOT DESIGNED, OR (IV) IMPROPER STORAGE AND HANDLING OF THE PRODUCTS.

Unless otherwise expressly stated on the Product or in the documentation accompanying the Product, the Product is intended for research only and is not to be used for any other purpose, including without limitation, unauthorized commercial uses, in vitro diagnostic uses, ex vivo or in vivo therapeutic uses, or any type of consumption by or application to humans or animals.
