Safety

Safety Alert Words

Four safety alert words appear in Applied Biosystems user
documentation at points in the document where you need to be aware
of relevant hazards. Each alert word—IMPORTANT, CAUTION,
WARNING, DANGER—implies a particular level of observation or
action, as defined below.

Definitions

IMPORTANT! – Indicates information that is necessary for proper
instrument operation, accurate chemistry kit use, or safe use of a
chemical.

⚠️ CAUTION  – Indicates a potentially hazardous situation that,
if not avoided, may result in minor or moderate injury. It may also be
used to alert against unsafe practices.

⚠️ WARNING  – Indicates a potentially hazardous situation that,
if not avoided, could result in death or serious injury.

⚠️ DANGER  – Indicates an imminently hazardous situation
that, if not avoided, will result in death or serious injury. This signal
word is to be limited to the most extreme situations.

Chemical Hazard Warning

⚠️ WARNING  CHEMICAL HAZARD. Some of the chemicals
used with Applied Biosystems instruments and protocols are
potentially hazardous and can cause injury, illness, or death.
Preface

**Chemical Safety Guidelines**

To minimize the hazards of chemicals:

- Read and understand the Material Safety Data Sheets (MSDSs) provided by the chemical manufacturer before you store, handle, or work with any chemicals or hazardous materials. (See “About MSDSs” on page vi.)
- Minimize contact with chemicals. Wear appropriate personal protective equipment when handling chemicals (for example, safety glasses, gloves, or protective clothing). For additional safety guidelines, consult the MSDS.
- Minimize the inhalation of chemicals. Do not leave chemical containers open. Use only with adequate ventilation (for example, fume hood). For additional safety guidelines, consult the MSDS.
- Check regularly for chemical leaks or spills. If a leak or spill occurs, follow the manufacturer’s cleanup procedures as recommended in the MSDS.
- Comply with all local, state/provincial, or national laws and regulations related to chemical storage, handling, and disposal.

**About MSDSs**

Chemical manufacturers supply current Material Safety Data Sheets (MSDSs) with shipments of hazardous chemicals to new customers. They also provide MSDSs with the first shipment of a hazardous chemical to a customer after an MSDS has been updated. MSDSs provide the safety information you need to store, handle, transport, and dispose of the chemicals safely.

Each time you receive a new MSDS packaged with a hazardous chemical, be sure to replace the appropriate MSDS in your files.

**Obtaining MSDSs**

The MSDS for any chemical supplied by Applied Biosystems is available to you free 24 hours a day. To obtain MSDSs:

1. Go to [https://docs.appliedbiosystems.com/msdssearch.html](https://docs.appliedbiosystems.com/msdssearch.html)
2. In the Search field of the MSDS Search page:
   a. Type in the chemical name, part number, or other information that you expect to appear in the MSDS of interest.
   b. Select the language of your choice.
   c. Click **Search**.
3. To view, download, or print the document of interest:
   a. Right-click the document title.
   b. Select:
      • Open – To view the document
      • Save Target As – To download a PDF version of the document to a destination that you choose
      • Print Target – To print the document

4. To have a copy of an MSDS sent by fax or e-mail, in the Search Results page:
   a. Select Fax or Email below the document title.
   b. Click RETRIEVE DOCUMENTS at the end of the document list.
   c. Enter the required information.
   d. Click View/Deliver Selected Documents Now.

Note: For the MSDSs of chemicals not distributed by Applied Biosystems, contact the chemical manufacturer.

Chemical Waste Hazards

⚠️ CAUTION 🟢 HAZARDOUS WASTE. Refer to Material Safety Data Sheets and local regulations for handling and disposal.

⚠️ WARNING 🔴 CHEMICAL WASTE HAZARD. Wastes produced by Applied Biosystems instruments are potentially hazardous and can cause injury, illness, or death.

⚠️ WARNING 🟢 CHEMICAL STORAGE HAZARD. Never collect or store waste in a glass container because of the risk of breaking or shattering. Reagent and waste bottles can crack and leak. Each waste bottle should be secured in a low-density polyethylene safety container with the cover fastened and the handles locked in the upright position. Wear appropriate eyewear, clothing, and gloves when handling reagent and waste bottles.
Chemical Waste Safety Guidelines

To minimize the hazards of chemical waste:

- Read and understand the Material Safety Data Sheets (MSDSs) provided by the manufacturers of the chemicals in the waste container before you store, handle, or dispose of chemical waste.
- Provide primary and secondary waste containers. (A primary waste container holds the immediate waste. A secondary container contains spills or leaks from the primary container. Both containers must be compatible with the waste material and meet federal, state, and local requirements for container storage.)
- Minimize contact with chemicals. Wear appropriate personal protective equipment when handling chemicals (for example, safety glasses, gloves, or protective clothing). For additional safety guidelines, consult the MSDS.
- Minimize the inhalation of chemicals. Do not leave chemical containers open. Use only with adequate ventilation (for example, fume hood). For additional safety guidelines, consult the MSDS.
- Handle chemical wastes in a fume hood.
- After emptying the waste container, seal it with the cap provided.
- Dispose of the contents of the waste tray and waste bottle in accordance with good laboratory practices and local, state/provincial, or national environmental and health regulations.

Waste Disposal

If potentially hazardous waste is generated when you operate the instrument, you must:

- Characterize (by analysis if necessary) the waste generated by the particular applications, reagents, and substrates used in your laboratory.
- Ensure the health and safety of all personnel in your laboratory.
- Ensure that the instrument waste is stored, transferred, transported, and disposed of according to all local, state/provincial, and/or national regulations.

IMPORTANT! Radioactive or biohazardous materials may require special handling, and disposal limitations may apply.
BIOHAZARD. Biological samples such as tissues, body fluids, infectious agents, and blood of humans and other animals have the potential to transmit infectious diseases. Follow all applicable local, state/provincial, and/or national regulations. Wear appropriate protective equipment, which includes but is not limited to: protective eyewear, face shield, clothing/lab coat, and gloves. All work should be conducted in properly equipped facilities using the appropriate safety equipment (for example, physical containment devices). Individuals should be trained according to applicable regulatory and company/institution requirements before working with potentially infectious materials. Read and follow the applicable guidelines and/or regulatory requirements in the following:

- U.S. Department of Health and Human Services guidelines published in *Biosafety in Microbiological and Biomedical Laboratories* (stock no. 017-040-00547-4; [http://bmbl.od.nih.gov](http://bmbl.od.nih.gov))
- Occupational Safety and Health Standards, Bloodborne Pathogens (29 CFR§1910.1030; [http://www.access.gpo.gov/nara/cfr/waisidx_01/29cfr1910a_01.html](http://www.access.gpo.gov/nara/cfr/waisidx_01/29cfr1910a_01.html)).
- Your company’s/institution’s Biosafety Program protocols for working with/handling potentially infectious materials.

Additional information about biohazard guidelines is available at:

[http://www.cdc.gov](http://www.cdc.gov)
How to Obtain Support

For the latest services and support information for all locations, go to http://www.appliedbiosystems.com, then click the link for Support.

At the Support page, you can:

- Search through frequently asked questions (FAQs)
- Submit a question directly to Technical Support
- Order Applied Biosystems user documents, MSDSs, certificates of analysis, and other related documents
- Download PDF documents
- Obtain information about customer training
- Download software updates and patches

In addition, the Support page provides access to worldwide telephone and fax numbers to contact Applied Biosystems Technical Support and Sales facilities.
High Capacity cDNA Reverse Transcription Kits Protocol

Overview

Purpose of the High Capacity cDNA Reverse Transcription Kits
The High Capacity cDNA Reverse Transcription Kits for 200 and 1000 reactions contain all the reagents needed for reverse transcription (RT) of total RNA to single-stranded cDNA using a reaction size of 20 µL.

Kit Features
Use the kit for:
- Quantitatively converting up to 2 µg (for a 20-µL reaction) of total RNA to cDNA
- Generating single-stranded cDNA suitable for quantitative PCR applications
- Generating single-stranded cDNA suitable for short- or long-term storage

Output Applications
The cDNA reactions prepared using the High Capacity cDNA Reverse Transcription Kits can be used in a variety of applications, including:
- Quantitative PCR
- Archival storage
- Conversion to cRNA

About This Protocol
This protocol describes:
- Procedures for using the kits
- Recommendations for using the cDNA created using the kits
- Examples of cDNA conversion performance obtained using the kits
Good Laboratory Practices

PCR Good Laboratory Practices

PCR assays require special laboratory practices to avoid false positive amplifications (Kwok and Higuchi, 1989). The high throughput and repetition of these assays can lead to amplification of a single DNA molecule (Saiki et al., 1985; Mullis and Faloona, 1987).

- Wear a clean lab coat (not previously worn while handling amplified PCR products or used during sample preparation) and clean gloves when preparing samples for PCR amplification.
- Change gloves whenever you suspect that they are contaminated.
- Maintain separate areas, dedicated equipment, and supplies for:
  - Sample preparation and PCR setup
  - PCR amplification and post-PCR analysis
- Never bring amplified PCR products into the PCR setup area.
- Open and close all sample tubes and reaction plates carefully. Do not splash or spray PCR samples.
- Keep reactions and components sealed as much as possible.
- Use positive-displacement pipettes or aerosol-resistant pipette tips.
- Clean lab benches and equipment periodically with freshly diluted 10% chlorine bleach solution.

*High Capacity cDNA Reverse Transcription Kits Protocol*  
5
Using the High Capacity cDNA Reverse Transcription Kits

Overview
To synthesize single-stranded cDNA from total RNA using the High Capacity cDNA Reverse Transcription Kits:

1. Prepare the 2X Reverse Transcription Master Mix
2. Add total RNA to the 2X RT Master Mix to create a 1X mix
3. Perform reverse transcription in a thermal cycler
4. Use the reverse transcription reactions (cDNA) directly for quantitative or other PCR applications
5. Store the reverse transcription reactions (cDNA)

RNA Template Guidelines
For optimal performance of the High Capacity cDNA Reverse Transcription Kits, Applied Biosystems recommends using RNA that is:

- Free of inhibitors of reverse transcription and PCR
- Dissolved in PCR-compatible buffer or water
- Free of RNase activity

Note: If you suspect that the RNA contains RNase activity, add RNase Inhibitor to the reverse transcription reaction at a final concentration of 1.0 U/µL.

Input Amount of Total RNA
Use up to 2 µg of total RNA per 20-µL reaction.
Preparing the 2X Reverse Transcription Master Mix

Prepare the 2X RT master mix using the kit components before preparing the reaction plate.

To prepare the 2X RT master mix (per 20-µL reaction):

1. Allow the kit components to thaw on ice.

2. Referring to the table below, calculate the volume of components needed to prepare the required number of reactions.

   **Note:** Prepare the RT master mix on ice.

<table>
<thead>
<tr>
<th>Component</th>

</tbody>
</table>

**IMPORTANT!** Include additional reactions in the calculations to provide excess volume for the loss that occurs during reagent transfers.

**WARNING** CHEMICAL HAZARD. 10X Reverse Transcription Buffer may cause eye, skin, and respiratory tract irritation. Read the MSDS, and follow the handling instructions. Wear appropriate eyewear, clothing, and gloves.

3. Place the 2X RT master mix on ice and mix gently.
Preparation of the cDNA Reverse Transcription Reactions

To prepare the cDNA RT reactions:

1. Pipette 10 µL of 2X RT master mix into each well of a 96-well reaction plate or individual tube.

2. Pipette 10 µL of RNA sample into each well, pipetting up and down two times to mix.

3. Seal the plates or tubes.

4. Briefly centrifuge the plate or tubes to spin down the contents and to eliminate any air bubbles.

5. Place the plate or tubes on ice until you are ready to load the thermal cycler.

Performing Reverse Transcription

To perform reverse transcription:

1. Program the thermal cycler conditions using one of the thermal cyclers listed in Table 3 on page 4.

   **IMPORTANT!** These conditions are optimized for use with the High Capacity cDNA Reverse Transcription Kits.

<table>
<thead>
<tr>
<th>Step 1</th>
<th>Step 2</th>
<th>Step 3</th>
<th>Step 4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Temperature (°C)</td>
<td>25</td>
<td>37</td>
<td>85</td>
</tr>
<tr>
<td>Time</td>
<td>10 min</td>
<td>120 min</td>
<td>5 min</td>
</tr>
</tbody>
</table>

2. Set the reaction volume to **20 µL**.

3. Load the reactions into the thermal cycler.

4. Start the reverse transcription run.
You can store cDNA RT plates or tubes prepared using the High Capacity cDNA Reverse Transcription Kits for short-term or long-term storage.

**IMPORTANT!** If required, briefly centrifuge the archive plates or tubes before storing to spin down the contents and to eliminate any air bubbles.

<table>
<thead>
<tr>
<th>Storage Duration</th>
<th>Storage Temperature (°C)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Short-term (up to 24 hours before use)‡</td>
<td>2 to 6</td>
</tr>
<tr>
<td>Long-term</td>
<td>−15 to −25</td>
</tr>
</tbody>
</table>

‡ For prolonged storage at 2 to 6 °C, add EDTA to a final concentration of 1 mM to chelate cations and to prevent nucleic acid degradation.
Using the High Capacity cDNA Reverse Transcription Kits
Appendix A: Examples of cDNA Yields from Reverse Transcription

Quantitative PCR

To determine the yield of the cDNA from the reverse transcription of total RNA, use quantitative PCR to test various input amounts of RNA for the cDNA yield of different gene targets.

The table below lists some targets and Applied Biosystems kits that you can use to evaluate the yield of cDNA conversion.

<table>
<thead>
<tr>
<th>Gene Target</th>
<th>Kit</th>

<td>TaqMan® β-actin Detection Reagents</td>
<td>401846</td>
</tr>
</tbody>
</table>

You can use other TaqMan® Gene Expression Assays to evaluate the yield of cDNA conversion. For a list of available assays, visit www.appliedbiosystems.com.

Yields for Different Targets

For the example in this appendix, the input total RNA was obtained from human Raji cells, and the RNA was converted to cDNA using the High-Capacity cDNA Reverse Transcription Kits.

Figure 1 shows an example of quantitative PCR results from the cDNA for 11 different gene targets, which vary in expression levels.

Note: The amplicon for β2-microglobulin in this study was specifically designed to be A/U rich.

The threshold cycle (C_t) values are plotted against RNA input amounts of 0.1, 1.0, and 10.0 µg in 100-µL reactions.
Appendix A  Examples of cDNA Yields from Reverse Transcription

Figure 1  The expected $\Delta C_T$ values of 3.3 for each tenfold increase in the RNA input quantity are obtained for 11 different RNA transcripts converted to cDNA from different input quantities of total RNA.

Yield vs. Reaction Time

To achieve optimal conversion, Applied Biosystems recommends allowing reverse transcription to occur for 120 minutes at 37 °C.

Figures 2, 3, and 4 show $C_T$ values plotted against reaction time in minutes for three different targets (18S, GAPDH, and $\beta_2$-microglobulin) and three input amounts of RNA (0.1, 1.0, and 10.0 µg in 100-µL reactions).
Figure 2  The rate of conversion of 18S RNA to cDNA reaches a maximum at 120 minutes with 10 µg of input RNA and at 30 minutes or less with 0.1 to 1.0 µg of input RNA (based on 100-µL reactions).

Figure 3  The rate of conversion of GAPDH RNA to cDNA reaches a maximum at 60 minutes or less at all RNA input levels (based on 100-µL reactions).
Figure 4  The rate of conversion of $\beta_2$-microglobulin RNA to cDNA reaches a maximum at 60 minutes or less at all RNA input levels (based on 100-µL reactions).
